

**University of
Sunderland**

Faculty: BSc (Hons) Computer Systems Engineering

NAME: Bishal Yadav

STUDENT NUMBER: 250775341

MODULE CODE: CET138

MODULE TITLE: Full Stack Development

MODULE LEADER: David Grey

SUBMISSION DATE AND TIME: 19th of June, 2026

ASSIGNMENT: 1

Academic Misconduct is an offence under university regulations, and this involves:

- **Plagiarism** – where you use information from another information source (including your previously submitted work) and pass it off as your own. This can be through direct copying, poor paraphrasing and/or absence of citations.
- **Collusion** – where you work too closely, intentionally, or unintentionally, with others to produce work that is similar in nature. This can be through loaning of materials, drafts or through unauthorised use of a fellow student's work.
- **Asking another person to write your assignment** – where you ask another individual or company to complete your work for you, be that paid or unpaid, and submit it as if it were your own.
- **Unauthorised use of artificial intelligence** – where you use artificial intelligence tools to generate your assignment instead of completing it yourself and/or where you have not been given permission to use artificial intelligence tools by your module leader. Please complete the following declaration around your use of artificial intelligence tools in your assignment.

STATEMENT ON USE OF ARTIFICIAL INTELLIGENCE TOOLS:

• I have used artificial intelligence tools to generate an idea for my assignment:	NO
• I have used artificial intelligence tools to write my assignment for me:	NO
• I have used artificial intelligence tools to brainstorm ideas for my assignment:	YES
• I have used artificial intelligence tools to correct my original assignment:	NO

DECLARATION

- I understand that by submitting this piece of work I am declaring it to be my own work and in compliance with the university regulations on Academic Integrity.
- I confirm that I have done this work myself without external support or inappropriate use of resources.
- I understand that I am only permitted to use artificial intelligence tools in line with guidance provided by my Module Leader, and I have not used artificial intelligence tools outside this remit.
- I confirm that this piece of work has not been submitted for any other assignment at this or another institution prior to this point in time.
- I can confirm that all sources of information, including quotations, have been acknowledged by citing the source in the text, along with producing a full list of the sources used at the end of the assignment.
- I understand that academic misconduct is an offence and can result in formal disciplinary proceedings.
- I understand that by submitting this assignment, I declare myself fit to be able to complete the assignment and I accept the outcome of the assessment as valid and appropriate.

Bootstrap

Bootstrap is a popular framework that people use to make websites look good. If you are making a website and you have to write all the code from scratch it is like building a house and making all the bricks yourself. But if you use Bootstrap it is like buying walls and doors that are already made so you can just put them together. The people who made Bootstrap were developers at Twitter. They wanted to make sure all their tools looked the same. Bootstrap makes it really easy to make websites that look clean and modern and work well on phones and computers.

What does Bootstrap actually do?

When you use Bootstrap you get to use a lot of -written code that you can just add to your website. Bootstrap gives you a lot of things that you can use to make your website look good.

Here are some things that Bootstrap does:

- It has a grid system that helps your website look good on phones and computers.

This grid system splits the screen into 12 parts so you can say "on a computer screen show three things next to each other but on a phone stack them on top of each other".

- It has a lot of -made components like buttons and navigation bars and forms that you can just add to your website.

You do not have to spend a lot of time making them look good because Bootstrap already did that for you.

You just have to add some code to your website like `class="btn btn-success"`. It will look good.

- It makes sure that your website looks the same on all browsers, like Chrome and Safari and Edge.

Sometimes these browsers show websites a little differently. Bootstrap makes sure that your website looks the same on all of them so you do not have to worry about it. Bootstrap is really helpful because it saves you a lot of time and makes your website look good. You can use Bootstrap to make your website look really good and work well on all devices. Comparison: Raw CSS vs. Bootstrap

Look how much time you save. If you wanted a modern, rounded green button:

Using Raw CSS:

HTML

```
<button class="my-custom-button">Register</button>
```

CSS

```
/* CSS */
.my-custom-button { background-
color: #2ecc71; color: white;
padding: 10px 20px;
border: none; border-
radius: 6px; cursor:
pointer; font-weight: bold;
}
.my-custom-button:hover {
background-color: #27ae60;
}
```

Using Bootstrap:

You don't need to write *any* CSS. You just apply Bootstrap's pre-made classes directly in your HTML:

HTML

```
<button class="btn btn-success">Register</button>
```

How to Add Bootstrap to Your Registration Form

You don't even need to download any files to use it. You can link directly to Bootstrap's files hosted online using a **CDN (Content Delivery Network)** link.

Let's convert your registration form to a premium Bootstrap layout. Create a new file in your project folder named `bootstrap_form.html` and paste this code:

HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Bootstrap Registration Form</title>
  <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.3/dist/css/bootstrap.min.css"
rel="stylesheet">
</head>
<body class="bg-light py-5">

  <div class="container">
    <div class="row justify-content-center">
      <div class="col-md-8 col-lg-6">

        <div class="card shadow-sm border-0 rounded-3">
          <div class="card-body p-4 p-md-5">
```

```
<h1 class="text-center h3 text-primary mb-4 pb-2 border-bottom">User Registration
Form</h1>
```

```
<form action="#" method="post">
```

```
<div class="mb-3">
  <label for="fullname" class="form-label fw-semibold">Full Name</label>
  <input type="text" class="form-control" id="fullname" placeholder="Enter Full Name"
required>
</div>
```

```
<div class="mb-3">
  <label for="email" class="form-label fw-semibold">Email address</label>
  <input type="email" class="form-control" id="email" placeholder="name@example.com"
required>
</div>
```

```
<div class="mb-3">
  <label for="country" class="form-label fw-semibold">Country</label>
  <select class="form-select" id="country">
    <option value="" selected>Select Country</option>
    <option>Nepal</option>
    <option>India</option>
    <option>USA</option>
    <option>Australia</option>
  </select>
</div>
```

```
<div class="form-check mb-4">
  <input class="form-check-input" type="checkbox" id="terms" required>
  <label class="form-check-label text-muted" for="terms">
    I agree to Terms and Conditions
  </label>
</div>
```

```
<div class="d-grid gap-2 d-md-flex justify-content-md-end">
  <button type="reset" class="btn btn-outline-danger px-4">Reset</button>
<button type="submit" class="btn btn-primary px-4">Register</button>
</div>
```

```
</form>
```

```
</div>
</div>
```

```
        </div>
    </div>
</div>

<script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.3/dist/js/bootstrap.bundle.min.js"></script>
</body>
</html>
```

Notice the class names used here:

- bg-light and py-5: Instantly colors the page background light grey and adds vertical spacing (padding-y).
- card shadow-sm border-0: Creates a beautiful card wrapper with soft dropping shadows and removes harsh borders.
- form-control and form-select: Automatically applies perfect padding, borders, width, and glowing click effects to input boxes.
- btn btn-primary and btn btn-outline-danger: Gives you access to standard, clean web button templates natively.
